Arrays in Java

Unlike C++, arrays are first class objects in Java. For example, in the following program, size of array is accessed using *length* which is a member of *arr[]* object.

```
// file name: Main.java
public class Main {
    public static void main(String args[]) {
        int arr[] = {10, 20, 30, 40, 50};
        for(int i=0; i < arr.length; i++)
        {
              System.out.print(" " + arr[i]);
        }
    }
}
```

Output:
10 20 30 40 50
