

## Find the smallest and second smallest element in an array

**Question:** Write an efficient C program to find smallest and second smallest element in an array.

**Difficulty Level:** Rookie

**Algorithm:**

- 1) Initialize both first and second smallest as INT\_MAX  
*first = second = INT\_MAX*
- 2) Loop through all the elements.
  - a) If the current element is smaller than *first*, then update *first* and *second*.
  - b) Else if the current element is smaller than *second* then update *second*

**Implementation:**

```
#include <stdio.h>
#include <limits.h> /* For INT_MAX */

/* Function to print first smallest and second smallest elements */
void print2Smallest(int arr[], int arr_size)
{
    int i, first, second;

    /* There should be atleast two elements */
    if (arr_size < 2)
    {
        printf(" Invalid Input ");
        return;
    }
}
```

```

}

first = second = INT_MAX;
for (i = 0; i < arr_size ; i ++)
{
    /* If current element is smaller than first then update both
       first and second */
    if (arr[i] < first)
    {
        second = first;
        first = arr[i];
    }

    /* If arr[i] is in between first and second then update second
    else if (arr[i] < second && arr[i] != first)
        second = arr[i];
}
if (second == INT_MAX)
    printf("There is no second smallest element\n");
else
    printf("The smallest element is %d and second Smallest element
           first, second);
}

```

```

/* Driver program to test above function */
int main()
{
    int arr[] = {12, 13, 1, 10, 34, 1};
    int n = sizeof(arr)/sizeof(arr[0]);
    print2Smallest(arr, n);
    return 0;
}

```

Output:

The smallest element is 1 and second Smallest element is 10

The same approach can be used to find the largest and second largest elements in an array.

**Time Complexity:** O(n)

Please write comments if you find any bug in the above program/algorithm or other ways to solve the same problem.
