

Does Java support goto?

Unlike C/C++, Java does not have *goto* statement, but java supports label. The only place where a label is useful in Java is right before nested loop statements. We can specify label name with break to break out a specific outer loop. Similarly, label name can be specified with continue.

See following program for example.

```
// file name: Main.java
public class Main {
    public static void main(String[] args) {
        outer: //label for outer loop
        for (int i = 0; i < 10; i++) {
            for (int j = 0; j < 10; j++) {
                if (j == 1)
                    break outer;
                System.out.println(" value of j = " + j);
            }
        } //end of outer loop
    } // end of main()
} //end of class Main
```

Output:

value of j = 0
